

VS600

Automatic screwing module

The VS600 is an automatic screwing module with motorised pliers that can be used to cap all types of corks

The VS600 is an automatic screwdriver equipped with :

- A product detection and stopping device for manual capping, with a cork presence control cell.
- A product detection and stopping device under the screwing head, with a pneumatic jack with a «V» tip and anti-rotation plate.
- Electrically height-adjustable screwdriver fitted with a screwing head for one cap format.

Available options

- Additional conveyor length.
Additional grooved screwing head.
Additional centring screw.

Before validating your order, we can carry out free tests to ensure the feasibility of your project. Don't hesitate to contact us!

Limits of the VS600

- Stoppering of «pump» or «spray» type bottles.

Technical focus n°1

SCREWING HEAD

The screwing heads are made to measure according to the samples (plugs) specified at the time of order and received by our quality department. Changing or adding a plug would mean changing the tooling.
